MILITARYAmmunition Assembly Plant, SAJOBABONY: 1956

1. The plant is situated approximately 500 metres S.E. from the outskirts of the town. Only the guardroom and the entrance are visible from the road. See sketch at Appendix "A".

2. The plant lies underground in a hilly area surrounded by t.p.s 160, 180, 200, 170 and 150 metres and covering approximately 1 sq.km. A single-track normal-gauge railway line connects the plant with MISKOLC.

3. Description of buildings and installations:

Control point at the entrance held by AVH guards (blue cap-bands). The guardroom is marked (a) on the sketch.

Underground offices marked (b)

Approximately five concrete cellars containing stored ammunition are situated at the W. part of the underground area and marked (c) on the attached sketch.

4. The assembly-work is carried out by approximately 3,000 labourers working in three shifts. The labourers' colony is situated opposite the factory and N. of the road, and marked (d) on the attached sketch.

5. The following types of ammunition are assembled and made ready for use:

(i) 4.5, 7.62, 12.2 and 15.2 cm artillery grenades;

(ii) 50 cm and 82 cm mortar bombs;

(iii) Anti-tank and field mines.

Shells for this ammunition are delivered by the DIOSGYOR Works, and the explosives by the ~~SAZOKAZINC~~ BARGIKA Chemical Works.

6. Security regulations are strictly observed. Besides armed AVH guards, factory police (IPARI RENDELSEG) patrol the premises, and informers are planted among the workers.
